Curated For You By You: Deployment Manual

This manual will guide you through using Docker to build and locally host all modules of the application.

Getting Started with Docker (Recommended)

The easiest way to run "Curated For You By You" is with Docker Compose. This ensures that the application and its database run in a consistent environment on any computer (Windows, macOS, or Linux).

Prerequisites

- Install [Docker Desktop](#) for your operating system and ensure it is running.

Running the Application

1. **Open your terminal or command prompt.**
2. **Navigate to the root directory of the project.**
3. **Start the application:**

Run the following command to build and start the frontend, backend, and database services:

```
docker-compose up --build -d
```

4. **Seed the database:**

Once the services are running, you need to populate the database with music data. Run this command from the root project directory:

```
docker-compose exec backend python seed_db.py
```

5. **Access the application:**

Open your web browser and go to: <http://localhost:8080>
