

Curated For You, By You REST API

Simple backend requests for artist and discography management.

Version: 1.0.0

/

GET

Summary: Get Root

Description: Returns the API name, version, status, and a directory of available endpoints.

Responses

Code	Description
200	Successful Response

/artists

GET

Summary: Get Artists

Description: Search artists by genre, location, or geographic radius. If a radius is provided without coordinates, the API attempts to geocode the `location` string.

Parameters

Name	Located in	Description	Required	Schema
genre	query	Music genre to filter by (case-insensitive)	No	string
country	query	Country name to match against location	No	string
city	query	City name to match against location	No	string
location	query	General location string; used for geocoding if radius is provided	No	string

Name	Located in	Description	Required	Schema
latitude	query	Latitude for radial search	No	number
longitude	query	Longitude for radial search	No	number
radius	query	Search radius in miles	No	number

Responses

Code	Description
200	Successful Response
404	Location not found (if location parameter was provided but yielded no results)

/artists/genre

GET

Summary: Get Artists By Genre

Description: Returns a list of \$N\$ artists filtered by a specific genre.

Parameters

Name	Located in	Description	Required	Schema
genre	query	The musical genre to search for	Yes	string
n	query	The number of artist records to return	Yes	integer

/artists/location

GET

Summary: Get Artists by Genre and Location

Description: Returns an array of \$N\$ artists filtered by genre and a case-insensitive regex match on the city/location.

Parameters

Name	Located in	Description	Required	Schema
genre	query	The musical genre to search for	Yes	string

Name	Located in	Description	Required	Schema
location	query	City or location name (regex match)	Yes	string
n	query	The number of artist records to return	Yes	integer

/artists/{name}

GET

Summary: Get Artist Info

Description: Retrieves the complete profile for a specific artist by name.

Parameters

Name	Located in	Description	Required	Schema
name	path	Case-insensitive name of the artist	Yes	string

Responses

Code	Description
200	Successful Response
400	Name not provided
404	No artist found with that name

/artists/{name}/description

GET

Summary: Get Artist Description

Description: Returns the bio/summary for the specified artist.

Parameters

Name	Located in	Description	Required	Schema
name	path	Case-insensitive name of the artist	Yes	string

/artists/{name}/image

GET

Summary: Get Artist Image
Description: Returns the image URL for the specified artist.

Parameters

Name	Located in	Description	Required	Schema
name	path	Case-insensitive name of the artist	Yes	string

/albums/{title}/description

GET

Summary: Get Album Description
Description: Searches all artists to find an album matching the title and returns the album's full details (year, tracks, etc.).

Parameters

Name	Located in	Description	Required	Schema
title	path	Title of the album to retrieve	Yes	string

/cloud/artists

GET

Summary: Get Cloud Artists
Description: Fetches artist data from an external Cloud Service Client. Includes error handling for auth, timeouts, and connection issues.

Parameters

Name	Located in	Description	Required	Schema
genre	query	Filter by genre	No	string
country	query	Filter by country	No	string
city	query	Filter by city	No	string

/artists/register

POST

Summary: Register Artist

Description: Normalizes and saves a new artist profile to the database. Prevents duplicate registrations by name.

Request Body

Schema	Description
RegisteredArtist	The artist profile data

Responses

Code	Description
200	Artist registered successfully
409	Artist already exists in the database

/artists/register/discography

POST

Summary: Register Artist Discography

Description: Appends a list of albums to an existing artist's record.

Parameters

Name	Located in	Description	Required	Schema
artist_name	query	The name of the artist to update	Yes	string
